

Halo Aircrew EBS

SKU: 83299

Breathe with confidence in critical moments. The Halo Aircrew Emergency Breathing System (EBS) is a certified, high-performance breathing device designed to support aircrew during underwater escape scenarios following a helicopter ditching or other over-water emergencies.

The Halo Aircrew EBS is an integrated secondary air source developed specifically for helicopter aircrew survival equipment. It delivers a reliable supply of breathable air during underwater escape scenarios, helping the wearer maintain controlled breathing while navigating through submerged exits.

Engineered for rapid deployment, the EBS can be activated quickly and efficiently with one hand, even under stress. The system uses a lightweight compressed air cylinder combined with an ergonomic low-pressure hose and mouthpiece to provide an efficient and intuitive breathing experience. A clear cylinder pressure indicator helps the wearer or support personnel verify system readiness.

Designed to integrate seamlessly with approved Halo lifejackets and compatible immersion suits, the Halo Aircrew EBS forms part of a complete over-water survival system for helicopter operations. It is intended for professional use by aircrew who require performance-oriented emergency breathing support during survival situations.

Key Features

- Emergency Breathing System (EBS) designed for helicopter aircrew
- Rapid, one-hand deployment for use in underwater escape
- Lightweight compressed air cylinder for ease of carry and minimal bulk
- Ergonomic low-pressure hose and mouthpiece with integrated nose clip for effective breathing
- Clear pressure indicator for quick status check
- Engineered to integrate with compatible Halo lifejackets and approved survival equipment
- Delivers a reliable air supply to aid controlled respiration during underwater escape
- Designed to support professional aircrew over-water operations

CertificationsProduct InfoEBS Systems

Other certifications	EN 486:2018
Size	032I
Working pressure	310 bar
Tank volume	0.32 liter
