

SeaEco+

SKU: SeaEcoPlus-SOLAS

Reliable protection when every second counts. The SeaEco+ Immersion Suit is designed to deliver essential thermal protection and buoyancy for personnel facing emergency water immersion in offshore and marine environments.

The SeaEco+ Immersion Suit is a practical, certified survival suit developed for use on vessels, offshore facilities and other marine environments where rapid evacuation into cold water may occur. It offers dependable insulation and water protection to support survival in critical situations.

Constructed from durable, weather-resistant materials, the suit is engineered to support wearer comfort and performance in cold and rough sea conditions. Its design focuses on thermal protection, water integrity and ease of donning, helping ensure that personnel are prepared quickly and effectively when required.

Functional elements such as secure cuffs, protective seals and reinforced areas help resist water ingress while enabling mobility during emergency egress. The suit's buoyancy characteristics and in-water behaviour support stable flotation, and practical survival features assist visibility and rescue readiness. It is intended for use without a lifejacket.

Key Features

- Professional emergency immersion suit for offshore and marine use
- Durable, weather-resistant construction for cold water environments
- Designed to provide thermal insulation and survival protection
- Secure cuffs and protective seals to help resist water ingress
- Reinforced areas for durability in demanding conditions
- Buoyancy design that supports stable in-water posture
- Enhanced visibility elements for improved detection
- Multiple sizes available for optimal fit
- Medium (147-170cm) / Std (150-200cm) / Extra Large (180-210cm)
