

Scubapro Jet fin

SKU: SP-JTFN

The Scubapro Jet Fin is an iconic rubber fin renowned for its durability, precise control, and dependable performance. Trusted by recreational, technical, professional, and military divers alike, it delivers powerful propulsion and exceptional maneuverability in demanding diving conditions.

The Scubapro Jet Fin is one of the most proven fin designs in diving, trusted by generations of recreational, technical, commercial, public safety, and military divers around the world. Its legendary durability, exceptional maneuverability, and reliable performance have made it an industry standard for demanding underwater environments.

Constructed from heavy-duty rubber, the Jet Fin delivers excellent propulsion while maintaining precise control. The distinctive vented design reduces drag during the recovery stroke, improving efficiency and minimizing fatigue during long dives. Its short, wide blade provides powerful thrust while allowing accurate frog kicks, helicopter turns, and reverse kicks, making it equally at home on technical dives, wrecks, caves, and general recreational diving.

Designed to perform in cold water and when used with drysuits, the Jet Fin pairs perfectly with heavy exposure protection and extensive diving equipment. Stainless steel spring straps come as standard, providing a secure fit and making donning and doffing easy, even while wearing thick gloves.

Whether you're exploring local dive sites, conducting professional operations, or diving in demanding technical environments, the Scubapro Jet Fin remains a benchmark for reliability, control, and long-lasting performance.

Dimensions & Weights

Foot Pocket Length (M) 22 cm

Foot Pocket Width (M) 10 cm

Product Length (M) 51 cm

Product Width (M) 23 cm

Product Weight (M) 2.38 kg

Industry and Applications

Industry	Military, Search and Rescue
Area of use	Rapid rescue at sea
