

Yak Throw Bag

SKU: Yak-Throw-Bag

Critical rescue gear you can throw with confidence. The Yak Throw Bag is an indispensable man-overboard rescue tool designed to help rescuers reach and recover a casualty efficiently and safely in water emergencies.

The Yak Throw Bag is a throwable rescue line fitted inside a specialised bag that supports accurate, long-distance throws to a person in the water. Its 'bullet bag' design helps the line travel cleanly and predictably when thrown, increasing the chances of reaching the target quickly in rescue situations.

Constructed from tough quick-dry polyester, the bag is built for rugged marine use. It includes a removable waist belt so it can be carried easily and accessed intuitively when needed. The floating rescue line is made from 8 mm thick floating rope with high load capability, making it suitable for a wide range of recreational and professional boating and rescue environments.

Key Features

- Throwable rescue line system designed for water rescue
- 'Bullet bag' design for long, accurate throws
- Constructed from durable quick-dry polyester for marine use
- Floating 8 mm thick line that helps keep the rope at the surface
- Removable waist belt for easy carry and access
- Reflective strip for improved visibility in low light
- Wide bag opening to support swift line repacking
- Available in multiple line lengths (15 m, 20 m, 25 m) to suit different rescue needs
