

# Ascomedic MS Emergency bag FZ

SKU: 85600

Warmth and protection when every moment counts. The Ascomedic MS Emergency Bag FZ is a high-performance thermal aid designed to help injured or exposed individuals retain body heat and stay protected in emergency situations on land or at sea.

The Ascomedic MS Emergency Bag FZ is a rugged emergency bag developed in collaboration with rescue professionals to support first responders, civil defence teams and armed forces in demanding environments. It combines windproof, waterproof and flame-retardant materials with a heat-reflective inner surface to enhance thermal protection for injured or exposed persons.

The bag is equipped with a full-length zipper with four sliders, allowing flexible opening and closure to suit the situation, including airway access or controlled entry of the casualty. Its metallized inner layer reflects and retains body heat, while reinforced mesh webbing allows the bag to be used as a stretcher for safe lifting and handling of the injured. Vacuum-sealed packaging keeps it compact for efficient storage until needed.

## Key Features

- Designed to help injured or exposed persons retain body heat in emergency situations
- Windproof, waterproof and flame-retardant material tested to LSA Code standards for survival protection
- Full-length zipper with four sliders for flexible access and airway management
- Metallized inner surface that reflects and retains body heat
- Reinforced mesh webbing enables the bag to support lifting and handling of casualties
- Compact vacuum-sealed packaging for minimal storage space and instant readiness
- Suitable for use by emergency services, civil defence and armed forces
- Can accommodate one person, and in some cases a parent and small child
