

Ascotherm Mk IV USCG

SKU: 85603

Fast thermal support when it counts. The Hansen Ascotherm MK IV is an advanced emergency thermal wrap designed to help retain body heat and support survival in cold, wet or shock-related conditions.

The Hansen Ascotherm MK IV provides thermal protection for survivors in liferafts and rescue boats, helping to shield them from rain, wind, and cold weather. Commonly used by first responders, rescue teams, medical personnel and outdoor operators to combat hypothermia risks. Each wrap is constructed with a metallised, heat-reflective inner layer that helps retain body heat by reflecting radiant heat back toward the wearer. The lightweight, compact design makes it ideal for inclusion in emergency kits, ambulances, liferafts and survival packs.

Lightweight, compact and intuitive to use, the Ascotherm MK IV is ideal for inclusion in first aid kits, survival packs and emergency response gear. It supports rapid deployment and quick application in time-sensitive scenarios, helping improve thermal protection and comfort for individuals exposed to harsh conditions on land or at sea.

Key Features

- Emergency thermal wrap designed to help retain body heat
- Metallised inner surface reflects radiant heat toward the wearer
- Lightweight and compact for easy storage in kits and packs
- Helps protect against hypothermia in cold, wet or shock scenarios
- Simple and intuitive design for rapid application
- Suitable for use by first responders, rescue teams and outdoor operators
- Effective aid for thermal protection in both land-based and marine environments
