

SeaPass Passenger Suit

SKU: SeaPass

Lightweight protection for emergency situations at sea. The SeaPass Passenger Suit is a SOLAS-approved survival suit designed to provide essential thermal protection for passengers on board vessels, helping reduce cold shock and support survival readiness in emergencies.

The SeaPass Passenger Suit is a compact emergency immersion suit developed for passenger vessels and recreational craft where space is limited and rapid response is essential. It is approved under SOLAS regulations as an uninsulated immersion suit, intended to be used in combination with a certified lifejacket for survival on water. With thermal protection rated for up to 1 hour in water temperatures below approximately 5 °C, the suit is designed to help slow heat loss and improve survival chances in cold water conditions.

Constructed from PU-coated nylon, the suit is extremely lightweight and vacuum packed, taking minimal space onboard. An integrated insulated neoprene hood, attached gloves and adjustable ankle straps help improve fit and comfort while reducing water ingress. The design allows the wearer to use their own shoes either inside or outside the suit for added versatility. Reflective tape enhances visibility, and vacuum packing extends the recommended service interval.

Key Features

- SOLAS-approved immersion suit designed for passenger vessel use
- Provides up to 1 hour of thermal protection in cold water environments
- Extremely lightweight and vacuum-packed for space-efficient storage
- PU-coated nylon construction for durability and water protection
- Integrated insulated neoprene hood for head protection
- Attached five-finger gloves and adjustable ankle straps for comfort
- Allows use of personal footwear either inside or outside the suit
- High-visibility reflective tape supports rescue detection
- Designed for use with a certified lifejacket to form a complete survival solution

Specifications Drysuit Industry and Applications Certifications Product Info
