

SeaAir EBS II 0,25l composite

SKU: 21081-2

Air you can rely on under pressure. The SeaAir EBS II Composite Emergency Breathing System is a compact, performance-oriented breathing device designed to support rapid underwater escape in helicopter ditching scenarios.

The SeaAir EBS II Composite delivers a reliable air supply to assist controlled breathing during submerged evacuations. Engineered for quick, one-hand deployment, it uses a lightweight composite cylinder to reduce weight and enhance handling. The system integrates easily with compatible survival gear and lifejackets to form part of a complete over-water safety solution.

Key Features

- Emergency Breathing System (EBS) for underwater escape
- Rapid one-hand deployment for use in high-stress situations
- Lightweight composite air cylinder for improved handling
- Ergonomic low-pressure hose and mouthpiece design
- Clear pressure indicator for quick status checks
- Designed to integrate with compatible lifejackets and survival systems
- Supports controlled respiration during submerged evacuation
- Attached nose clip

EBS Systems Industry and Applications

Working pressure	300 bar
Tank volume	0.25 liter
Industry	Aviation
Area of use	Rescue operations, Helicopter transport, Pilot and crew safety, Crew safety
