

OMS Slipstream

SKU: OMS-Slipstream

Lightweight, high-performance fins designed for professional divers who require efficient propulsion, excellent trim, and reliable durability. Ideal for public safety, commercial, scientific, military, and technical diving in demanding environments.

OMS Slipstream Fins are constructed from Monoprene®, creating an exceptionally lightweight fin without compromising performance. Designed for efficiency and power, they deliver excellent propulsion in all diving conditions while reducing leg fatigue.

Their lightweight design helps maintain proper trim, making them ideal for low-silt propulsion techniques and for minimizing impact when diving around delicate marine environments such as coral reefs.

Each pair comes equipped with durable stainless steel Spring Heel Straps that automatically adjust to the diver's foot for a secure, comfortable fit. The spring system compensates for depth-related changes and boot compression, while the virtually unbreakable stainless steel spring and safety cable, protected by a rugged fabric cover, provide long-lasting reliability and peace of mind.

Key features

- Made with Monoprene
- Includes Spring Heel Straps
- Excellent Performance
- Lightweight
- Weight per fin: L: 1kg, XL: 1,15kg, XXL: 1,3kg
