

RescueMe MOB2

SKU: 14041

Reliable locate-and-alert safety for man-overboard situations. The rescueME MOB2 is a compact, Class-M compliant man-overboard emergency device that combines AIS and VHF DSC technology to send rapid, precise location information during a fall-overboard event, helping crews react and recover faster.

The rescueME MOB2 is one of the most advanced AIS man-overboard transmitters available, designed for use on sailboats, workboats and offshore vessels where quick recovery of a person overboard is critical. When activated, either automatically through compatible inflatable lifejackets or manually by the wearer, the device immediately begins broadcasting its position to nearby AIS-equipped vessels and triggers a DSC distress alert on the vessel's VHF radio.

Integrated GPS positioning ensures accurate location data that is updated continuously, helping rescue teams pinpoint the wearer's position. Dual strobe lights (infrared and white) improve visual detection in low light and rough sea conditions. A built-in NFC interface allows convenient smartphone connectivity for configuration and status checks. Compact and lightweight, the MOB2 fits easily into most inflatable lifejackets for seamless integration with personal survival gear.

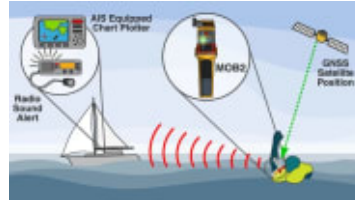

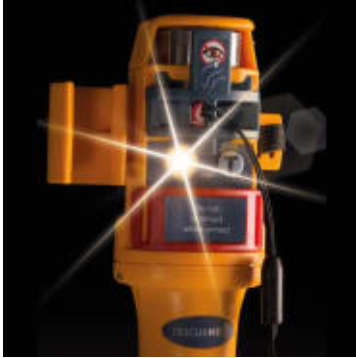

Key Features

- Class M compliant AIS MOB device with integrated digital selective calling capability (DSC)
- AIS and DSC alerts broadcast wearer position to nearby vessels and onboard systems
- Integrated GPS/GNSS for fast, accurate location tracking
- Automatic activation when installed within an inflatable lifejacket
- Manual activation option for user control
- Dual infrared and white strobe lights for enhanced visibility in water
- Compact, lightweight design - fits within most inflatable lifejackets
- NFC smartphone connectivity for easy programming and status checks
- Long-life battery with up to years of standby life and extended operational duration
- Waterproof to a depth of 10 metre, designed for harsh marine environments

Personal Locator Beacons Product Info

Transmitter type	AIS
Battery life - Standby	5 year
Battery life - Activated	24 hours
Length	13.4 cm
Width	3.8 cm
Height	2.7 cm
