

Berge SAR Rescue Bag

SKU: 84118-THERMO

The Berge Rescue Bag is a modular rescue system designed for search, rescue, and emergency preparedness operations. It integrates casualty protection, patient handling, and transportation into a single configurable platform, providing continuous care and full patient access throughout treatment, evacuation, and transport.

Berge Rescue Bag is a configurable rescue bag platform for search, rescue and preparedness. It integrates casualty protection, handling and transport into one continuous setup, maintaining patient access throughout treatment and evacuation. Its modular design allows configurations to be adapted to the rescue environment, with options for thermal protection, weather protection and compact deployment.

- **Thermal Protection**
Helps reduce heat loss from wind, weather and evaporation. Thermo configurations provide additional passive insulation when conditions require it.
- **Continuous Casualty Access**
Maintains access for assessment, treatment and monitoring while the casualty remains protected.
- **Protected Casualty Handling**
Integrates transfer, handling and evacuation into one continuous setup without the need to switch between protective systems.
- **Compact Deployment**
Low weight and compact packing make the system easy to prepare and deploy where time and carrying capacity are important.
- **Modular by Design**
Lite and Thermo top and bottom modules can be combined to suit the rescue environment and required level of thermal protection.
- **Weatherproof Barrier**
Helps protect the casualty from rain, wind and ground moisture while supporting a stable, protected microclimate.

Pack Size	Ø18 x 38cm
Insulation	Top: 4.0 / Bottom: 4.0
Access Features	4 puller 360° zipper; 3 puller chest zipper
Outer / inner material	Dyneema® Composite Fabrics
Waterproof rating	> 20,000 mmH ₂ O
Vapor barrier / permeability	Near-zero permeability (< 1 g/m ² /24h)
Carry system	10 integrated lifting straps
Sanitation	Up to 100 recommended surface decontamination cycles; machine washing validated up to 10 cycles at 60°C. See IFU.

Product Info

Weight

1420 g

Length	220 cm
Width	100 cm
Material	Dyneema®
