

AU10M/11-HT PLB

SKU: AU10M

Instant alerts when every second matters. The sMRT AU10-M is a next-generation maritime distress beacon designed to deliver rapid man-overboard alerts, precise tracking and reliable recovery support in critical situations.

The sMRT AU10-M is a commercial-grade Maritime Survivor Locating Device (MSLD) that combines AIS, VHF DSC and 121.5 MHz technology to provide fast, multi-channel alerting and accurate positioning during man-overboard incidents. It is engineered to ensure that nearby vessels are immediately alerted and able to assist in recovery efforts.

The device activates automatically when immersed in water or can be triggered manually, sending an alert within seconds and transmitting continuous position updates. Integrated dual GNSS (GPS and Galileo) ensures fast and accurate location tracking, allowing multiple casualties to be tracked simultaneously over long distances.

Designed for integration with lifejackets, such as the Halo Passenger, the AU10-M includes both audible and visual signalling features, including a high-intensity strobe and status LEDs, to improve detection in low-visibility conditions. Its rugged, waterproof construction ensures dependable performance in harsh marine environments, while Class-M compliance aligns it with the latest international MOB device standards.

Key Features

- Advanced AIS, VHF DSC and 121.5 MHz signalling for multi-channel distress alerting
- Automatic water activation within seconds, with optional manual activation
- Dual GNSS (GPS + Galileo) for fast, accurate positioning
- Continuous AIS position updates to nearby vessels for real-time tracking
- DSC alerts sent directly to VHF radios for immediate crew awareness
- High-intensity strobe light and LED indicators for visual identification
- Audible alarm to assist location and alert users
- Class-M compliant to current international MOB standards
- Designed for integration with compatible lifejackets like the Halo Passenger
- Rugged, waterproof construction for demanding marine environments
